
SUMMARY

- **Builder-PM** with hands-on experience scoping, shipping, and iterating on AI-powered products for real-world workflows. Combines deep **user research and customer engagement** with metrics-driven iteration to identify high-impact problems and turn ambiguous feedback into clear product direction. Experienced partnering directly with engineering and design to ship quickly. Backed by a quantitative foundation (Biostatistics M.Sci, **Mathematics and Economics**) and an AI-assisted development stack (Next.js, Supabase, Claude Code)

EDUCATION

Brown University*M.Sci | Biostatistics*

Providence, RI

*Expected May 2026***University of Michigan - Ann Arbor***B.S. | Mathematics, Economics*

Ann Arbor, MI

May 2024

SKILLS

- **AI & ML:** LLMs, fine-tuning, RAG, Prompt Engineering, Model Evaluation, Agentic Workflows, Generative AI, NLP
- **Product Management:** PRD, Roadmap, User Research, Stakeholder Alignment, Metrics & Analytics, A/B Testing, Agile/Scrum
- **Build & Ship:** Next.js, TypeScript, Supabase, Docker, Git, CI/CD, GCP, ChromaDB, Claude Code, Cursor, Vercel, v0, FastAPI, Linear, Figma
- **Data:** Python (Numpy, Pandas, PyTorch, Scikit-learn), R, SQL, Tableau

PRODUCT & ENTREPRENEURIAL EXPERIENCE

Waypoint*Co-founder & Product Lead*

Providence, RI

Dec 2025 – Present

- Co-founded and shaped product direction for an **AI-powered career exploration platform**, partnering with a technical co-founder to move from concept through user research, PRD definition, and MVP launch to a group of **50+ Brown students**.
- Engaged directly with 10+ users through interviews and in-product engagement signals to diagnose a core adoption blocker — students abandoned at the resume parsing step; led a product redesign that **increased completion rate from ~15% to ~70%**.
- Translated LLM-powered career recommendation capabilities into intuitive user workflows, partnering with engineering on scope, feature prioritization, and tradeoffs between model coverage and UX simplicity.
- Partnered with Brown University's career center as a pilot customer, gathering structured feedback to **prioritize the product roadmap** and inform iterative feature releases.

Multi-agent DnD AI game*Product Lead*

Providence, RI

Jan 2026 – Apr 2026

- Owned 0→1 roadmap for a multi-agent LLM game, defining metrics across narrative quality, rule adherence, and player engagement.
- **Diagnosed the “games never end” failure mode** in open-ended LLM products; designed a bounded state machine routing play into discrete combat rounds to guarantee every session reaches a narrative end.
- Wrote the PRD for LLM grounding, scoping a RAG pipeline (semantic chunking + ChromaDB) and an evaluation framework for intent detection and narrative coherence to drive iteration.
- **Shipped with engineering** on FastAPI and Next.js, fine-tuning the LLM on 38k Q&A via Vertex AI and instrumenting in-product analytics for gameplay debugging.

Campus Marketplace Platform – University of Michigan, Ann Arbor*Founder*

Ann Arbor, MI

Jan 2024 – Present

- Identified a supply-demand mismatch in the campus resale market and conducted user research with **40+ students**, surfacing **three pain points**: fragmented listings, low trust, and move-in/move-out time pressure that directly shaped product prioritization.
- **Shipped MVP as solo founder**, owning roadmap, UX, and schema: listing creation, UMich-email verification, seller-approved pre-booking, 6-dimension mutual credit scoring, real-time buyer-seller chat, and AI-powered bulk listing via Anthropic API.
- Designed a **time-bounded automated pricing system** using a convex decay curve bounded by seller-defined floor prices and semantic-similarity-matched market references, addressing seasonal urgency without sacrificing price control.
- Leveraged AI-assisted development (Claude Code, Cursor) on a Next.js + Supabase + Vercel stack to **compress engineering timeline from months to weeks**, enabling rapid iteration on user feedback

WORK EXPERIENCE

Intelliimpact LLC*Risk Analyst Intern*

New York, NY

June 2025 – August 2025

- Translated complex client needs into actionable investment strategy by conducting consultations to define risk objectives and financial constraints, directly informing the development of Strategic and Tactical Asset Allocation frameworks.
- Developed a Macro-Factor Model using economic indicators to forecast market changes, which **improved risk-adjusted performance by 23%** in back-testing and was piloted for use in live portfolio decisions.
- Improved cross-functional decision-making by **redesigning reporting dashboards** to clearly communicate model signals and portfolio impact, making analytical insights accessible and actionable for strategy, analytics, and allocation teams
